

What it does: type what's loaded in each hold position, the app compares it to the loadsheets target, then generates a CPM you can copy or share. Runs in any browser — phone, tablet or PC.

GOLDEN RULE Green badge = the hold matches the loadsheet. Make everything green, then generate the CPM.

1 Enter the app

Tap the aircraft on the home screen. Fill **Flight number**, **Registration** (with or without dash) and **Destination** at the top.

REQUIRED All three must be filled to generate a CPM — missing ones are highlighted red with a popup listing what's wrong.

2 Weight settings (set once)

Tap **Weight settings**. Bag weight and container weights live here, remembered for next time.

- Ticked** (normal) — the weight of the container is included in the weight you type in each compartment.
- Unticked** — type the load only; the app adds the pallet weight on top.

UNSURE? Leave both ticked — that's the normal Sunclass way.

3 Fill each hold

Positions are laid out like the aircraft: **L** left, **P** middle (pallet bay), **R** right. Per hold:

- Type the **target loadsheet weight**.
- Pick a mode and enter the value.
- Watch the badge go **green**.

Button	You type
B	number of bags (× bag wt + container)
C	weight in kg
M	weight in kg
CSU	nothing — auto-filled from target
X	nothing — auto-computed container tare

L/R tiles show B · CSU · C · M · X; P tiles omit B (no bags on pallets)

4 Generate the CPM

Tap **Generate CPM** in the bottom bar. Fill in:

- Date** (defaults to today), **ULD suffix** (DK), optional **SI**.
- ULD number** per position. L/R positions are always AKE; P positions are PMC or PLA. There's a Toggle all to set every P position at once.

OPTIONS Include empty positions — lists unloaded positions as -POS/N; pallet bays describe the empty space, so L/R lines under a free bay aren't repeated.
Skip the header line — omits the flight/date/reg line for systems that add their own.

5 Copy, share, or edit

The result shows a readable table and the raw message:

- **Edit the raw text** directly if needed.
- **Copy** or **Share...** (phone share menu).
- ← **Edit source data** to go back; **Regenerate** to rebuild from data (discards manual text edits).

New flight

Clear all wipes everything. Settings and theme are kept.
Closing the CPM window with ✕ keeps your entries.

6 Send via Notis

Since Notis already has the flight number, date and registration, **always tick "Skip the header line"** in CPM Buddy before copying — you only need the position lines.

Step 1 — Open the CPM in Notis

In the DTO window, click **CPM** for the flight at the bottom. Then click the **Flight** row to select it, and click **View**.

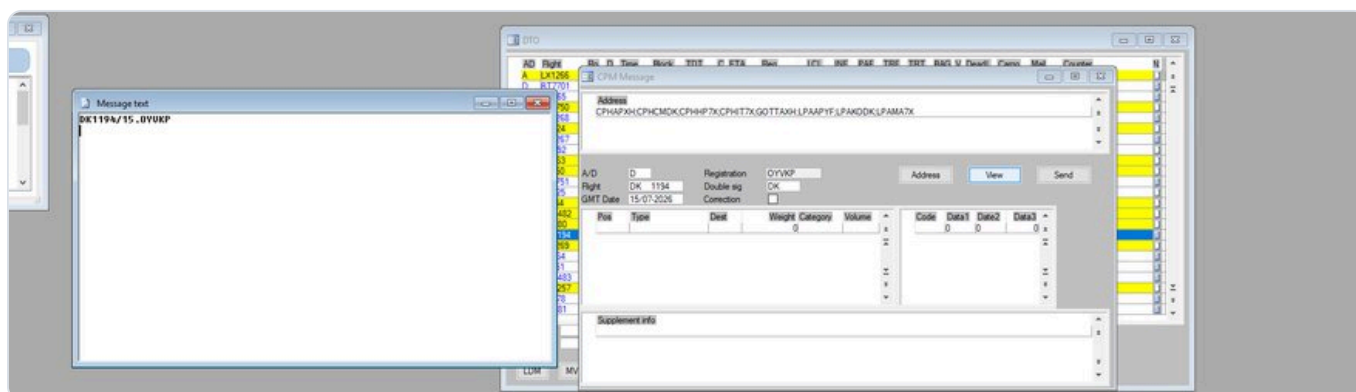

Select the flight, then click View

Step 2 — Insert the CPM text

In the Message text window, place your cursor at the **end of the header line (DK1194/15.OYVKP)**. Press **Enter** to create a new line, then press:

KEYBOARD SHORTCUT

Alt + I to insert (paste) the CPM lines

Place cursor on the line below the header, then Alt + I to insert

Step 3 — Save and send

After the lines appear, you have two options to save:

- Press **X** (close), then click **Yes** when asked to save, or
- Press **F3** to save and close directly.

Back in the CPM Message window, click **Send**. Done.

SUMMARY CPM Buddy (copy with header skipped) → Notis: CPM → Flight → View → cursor at end of header → **Enter** → **Alt + I** → **F3** → **Send**
